Engine friction creates heat, which wears on moving mechanical parts. Worn parts will cause havoc with emissions and gas mileage as your engine works harder to get you where you need to go. Wear inside a vehicle's engine can be damaging to the pocket-book or wallet, as it results in burning fuel less efficiently and creating extra trips to the gas station. But lubricants like Xen-Tx Extreme Engine Treatment make your engine run easier and cooler, adding to its life and improving performance. For more information on XenTx, visit [www.xentx.com](http://www.xentx.com).
